

# Mi5 Security Introduces RedEye REMOTE

**F**or the first time customers can receive real-time footage from a wire-free camera and the camera itself can now be triggered from up to 80m away. This makes Mi5 Security's RedEye range the most flexible and useable portable solution on the market.

Mi5 Security has launched the RedEye REMOTE as an extension to the popular 'RedEye' range of portable surveillance cameras. RedEye REMOTE Trigger delivers a wire-free trigger device that activates the wire-free RedEye cameras from up to 80m away. Further, RedEye REMOTE Night Vision delivers a wire-free portable infrared spotlight that can be positioned in close proximity to a target whilst the camera is installed at a distance.

## RedEye REMOTE Trigger - Case Study

A North Island based company who operates a road metal & shingle business has recently found a solution to a long-standing issue. The company is based in

a small North Island town, where loads of shingle are picked up at an un-manned site and recorded using an 'honesty box' system. Not surprisingly, there are often

more loads leaving the business than recorded in the honesty box!

The company Directors wanted a way to record all incoming/outgoing vehicles and have the ability to remotely view this information from their offices in Auckland. To further add to the challenge the site has no available mains power. Enter RedEye REMOTE Trigger...

A RedEye Wireless camera, with integrated GSM modem and telephoto lens (16mm) was paired to a RedEye REMOTE Trigger (PIR) unit to enable full recording & remote monitoring of all incoming/outgoing licence plates. This data is then used to reconcile loads taken from the facility against known authorised vehicle licence plates.

The Directors are able to log into their secure online MyMi5 account (view a demo of the MyMi5 service at <https://www.mymi5.com> and enter 'mymi5demo' as the login & password) and view all vehicle movements in & out of the facility. Loads that have been dishonestly taken are then invoiced to the offending party or handed to Police for further action.

### RedEye REMOTE Night Vision - Case Study

A South Island diary farmer has recently been experiencing a spate of costly diesel theft. To make matters worse, his insurance company has now significantly increased both the premium and excess on the annual insurance policy. Enter RedEye REMOTE Night Vision...

The farm has three diesel tanks, all positioned in remote areas where there is no available lighting or mains power.

A monochrome RedEye Standalone camera with telephoto lens (8mm) was paired to a RedEye REMOTE Night Vision unit. The REMOTE Night Vision unit was positioned near the fuel tank, which provided invisible infrared lighting to allow the camera to capture good quality nighttime images of the offender's.

This system has already enabled the farmer to identify offenders on three separate occasions since being installed at the fuel tanks.

Recently, Mi5 Security has won a number of business and technology awards, the most recent of which was the Red Herring Top 100. This award recognises the world's top emerging technology based companies whose innovations and technologies mark them as leaders in their industry. Mi5 was named as one of 100 businesses Venture Capitalists should watch as potentially being the next big thing!

For more information on how the RedEye REMOTE range may be able to help your clients, please phone Mi5 Security on 0800 111 309.
